1. theme of this conference: algebraic geometry riemannian geometry **symplectic four-manifolds through branched coverings** - symplectic four-manifolds through branched coverings organized by tye lidman, daniel ruberman, and laura starkston workshop summary symplectic geometry, especially in dimension 4, lives at the fertile interface of algebraic geometry and 4-dimensional topology, drawing from and enriching both of those subjects. **the space of symplectic structures on closed 4-manifolds ...** - symplectic manifolds in algebraic geometry. thirty years ago people even wondered whether there are closed non-kähler symplectic manifolds. we have now gradually realized that the world of kähler manifolds only occupies a tiny part of the symplectic world (see [27], [66] and the references therein). **semitoric integrable systems on symplectic 4-manifolds** - symplectic geometry, kähler manifolds and toric varieties in algebraic geometry. through the analysis of the quantization of such systems, one may also mention important links with the representation theory of lie groups and lie algebras, semiclassicals, and microlocal analysis. **symplectic resolution of isolated algebraic singularities** - a symplectic divisor in x^{\sim} is a set of symplectically embedded codimension two manifolds which intersect transversely. we say that the divisor is closed if each of the manifolds in dare closed. theorem 1. let ube a neighborhood of an isolated algebraic singularity p in the symplectic 4-manifold $(x \setminus \{p\}, \omega)$. there is a symplectic resolution ... **six lectures on four 4-manifolds - facultytes.uci** - symplectic structure [13]. thus, viewing 4-manifolds through the glasses of either a symplectic or complex geometer will not recover the full story. however, the amalgam of ideas from complex and symplectic geometry has provided surgical techniques that are useful in the study of smooth 4-manifolds. since this is a summer school in low ... **the isotopy problem for symplectic 4-manifolds** - the isotopy problem for symplectic 4-manifolds 3 papers (of the author or others), quoted in the references. it should be clear, however, that much credit is due to the ideas contained in [11] and [13]. **two forms - texas christian university** - symplectic manifolds 1. two forms given a two-form on a manifold m, we can evaluate it on a pair of tangent vectors to produce a number. that is, if in local coordinates $= x \dots$ 4 symplectic manifolds proposition 4.3. if mis a compact symplectic manifold of dimension $2n$, then $h_2k(m; \mathbb{R})$ is nontrivial for all k such that $0 < k < n$. **symplectic algebraic geometry and quiver varieties** - symplectic algebraic geometry and quiver varieties victor ginzburg lecture notes by tony feng contents ... i.e. x has an algebraic symplectic form ! 0. then ... the main theorem applied to smooth symplectic manifolds, but this is neither smooth nor symplectic. moreover, if you look at $h_2 \dots$ **symplectic topology and algebraic geometry ii: lagrangian ...** - symplectic topology and algebraic geometry ii: lagrangian submanifolds jonathan evans ucl ... however, to rule out certain cases (like hyperbolic or sol 3-manifolds) one needs techniques from symplectic geometry. ... algebraic geometry to symplectic problems, this theorem is a result in **the topology of symplectic four-manifolds** - from algebraic geometry. the topology of symplectic four-manifolds symplectic manifolds special features of dimension four the symplectic sum some open questions theorem (li, et al.) the kodaira dimension of (m, ω) is completely determined ... many symplectic 4-manifolds with fundamental group.
